International Master Program In Medical Science And Applications

INTRODUCTION

Precision health care is rapidly growing worldwide. Advances in NGS, big data, and AI are accelerating diagnosis, drug development, and clinical decision-making. This program is created to train professionals who can translate emerging medical technologies into real clinical and industryapplications.

- Cohort size: 12 international students per year
- English requirement: IELTS 5.0+ (or equivalent), or 4+ years of formal education in an English-speaking / English-medium program
- Tuition fee: USD 1700 (per semester)
- Scholarships:Two admitted students receive a full tuition waiver; an additional two admitted students receive an NT$8,000 monthly scholarship each.

PROGRAM HIGHLIGHTS

Three focused tracks help you build expertise fast:

1. Precision testing & big-data analytics
2. Regenerative medicine & cell therapy
3. Immunotherapy & gene editing applications

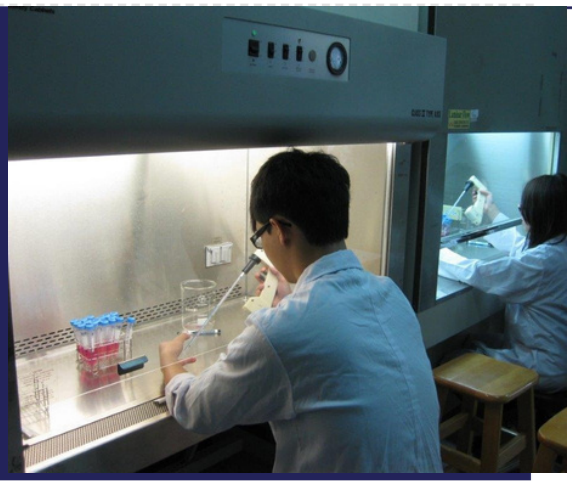

Strong research resources

Comprehensive platforms support the full research pipeline—from basic research andpreclinicalstudiestoclinicalvalidation andindustrytranslation—sostudentscan complete and strengthen their projects effectively.

Clinical linkage

Clinical-issue-driveninterdisciplinary trainingstrengthenstheconnection betweenbasicandclinicalresearch, improving real-world applicability.

International learning

English-taughtcoursesalignedwith currentinternationalresearchenhance research vision, innovation in application, and global competitiveness.

COURSES

Total 30 credits:Required 16 + Electives 14

- Year 1 (Foundation): Research Methods & Academic Ethics / Molecular and Cell Biology / Medical Statistics / Seminar (I–II).
- Year 2 (Advanced + Thesis): Seminar (III–IV) + Master's Thesis (6 credits).

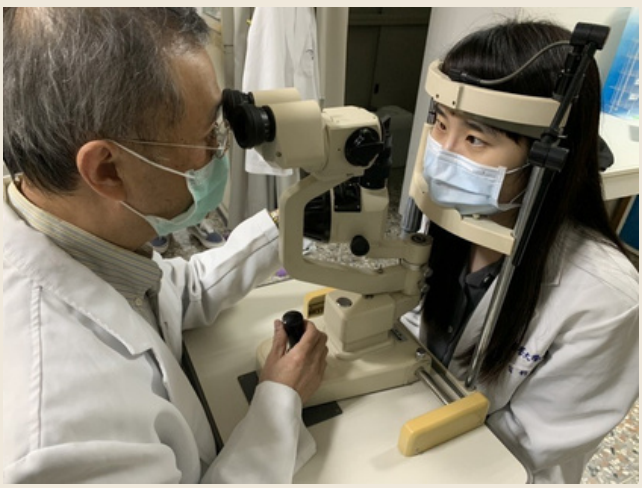

Courses are subject to official announcement.

Who should apply

- International applicants
- Graduates in healthcare/medical technology/biomedicne
- Working professionals in hospitals, academia, or government seeking upskilling in med-tech and digital health

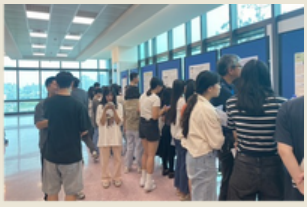

RESOURCES & CAREER

- Internationalization: continuously promotes an internationalized learning environment and international research collaboration.
- Career direction (what this curriculum prepares you for): biomedical industry roles and clinical trial-related work.

- Clinical & research ecosystem: participates in TPMI, with centers such as Biobank Management Center, Genetic Counseling Center, and Health Data Science Center.
- Strong linkage to practice: continuous investment in precision therapy and stem cell/cell therapy; has an International Medical Center; participates/leads clinical trials; annual internal research projects support clinical–basic collaboration

International Master Program of Healthcare Science

INTRODUCTION

The program responds to global health challenges and evolving industryneeds.Itintegratesgeriatrics,smarthealthmanagement, mental health, and long-term care to cultivate professionals with internationalperspectives,interdisciplinaryexpertise,andsmart healthapplicationcompetencies.

- Cohort size: 12 international students per year
- English requirement: IELTS 5.0+ (or equivalent), or 4+ years of formal education in an English-speaking / English-medium program
  Tuition fee: USD 1700 (per semester)
- Scholarships:Two admitted students receive a full tuition waiver; an
- additional two admitted students receive an NT$8,000 monthly scholarship each.

PROGRAM HIGHLIGHTS

The program focuses on healthy aging, smart health technology, and mentalhealthcare.Itaimstocultivatestudents'competenciesin international healthcare literacy, smart health technology applicationsanddataanalytics,aswellasprofessionalcapabilityin geriatricmedicine,long-termcare,andholisticcare.

Healthy Aging & Long-term Care

- Aging care needs, LTC management, service design, and quality improvement
- Develop expertise in geriatric medicine and long-term care to reinforce competencies in elderly care and mental health support.

Smart Health & Data Analytics

- Smart health tech, health information systems, data analytics, decision support
- Competence in smart health technology applications and data analytics

Mental Health & Holistic Care

- Mental health assessment, holistic care, supportive interventions
- Mental health assessment and holistic care ability

COURSES

Total 30 credits: Required 12 + Electives 18.

- Year 1: Medical Statistics / Research Methods and Ethics in Medical Technology / International Healthcare Seminar I & II.
- Year 2: International Healthcare Seminar III & IV / Aging Medicine / Innovation and Application of Health Information Technology.
  Electives: Aging medicine, geriatric mental health, healthcare management, artificial intelligence, big data, smart health, and long-term care.

Courses are subject to official announcement

WHO SHOULD APPLY

1. International students
2. Graduates in healthcare, medical technology, biomedicine, or related fields
3. Working professionals from medical institutions, academic institutions, or government agencies who wish to strengthen their expertise in healthcare science, smart health, and global health perspectives

中山醫學大學
Chung Shan Medical University

RESOURCES

- Diverse research instruments and analytical platforms support in vivo imaging, cellular, molecular, and metabolic research.
- The curriculum strengthens competencies in data analytics, health information systems, and technology applications in clinical care.
- Simulation-based teaching, case analysis, and practicum courses enhance clinical decision-making and professional practice competence.

CAREER

- Hospitals, health management, and public health organizations.
- Long-term care, mental health, health informatics, and project management (including New Southbound regions).
- NGOs/multinational health enterprises, research institutes, and academia; opportunities to work in Taiwan (work visa/long-term residency)..
