HIIP 2026 (Health Sciences-International Interprofessional Program)

TOKYO METROPOLITAN UNIVERSITY
東京都立大学

Summer, 2026

Overview

HIIP: Health Sciences-International Interprofessional Program	
Duration	From Monday, June 22 to Friday, July 24 (A five-week program starting in the last week of June) If the program start date is June 22 or later, participation is possible for a minimum of two weeks.
Host institution	Faculty of Health Sciences, Tokyo Metropolitan University and affiliated institutions
Learning Activities	Lectures, hospital visits, training, and social activities with TMU students, community survey, etc.
General Learning Outcomes	1) Develop knowledge of one's own role and those of other professions and use this knowledge to complete study assignments. 2) Learn to work together maintaining a climate of mutual respect and shared values to manage different professional and cultural backgrounds of group members. This includes communication in ways that support a team approach to completing the study tasks. 3) Students explore and explain how social-cultural background differences may impact practice. 4) Additional requirement for Karolinska Institutet students: Students shall be able to juxtapose their learning to their own profession and discuss possible implications for their profession's foundations and practice.

Syllabus 2026

Theme 1

Health and Care Practices	
Duration	From 1st week (=last week of June) onwards (First week focuses on roles of different professions, team-building, and introduction to Japanese health and care. Focus shift from second week to (collaborative practices across institutional and community care in Japan and participants' countries.
Learning Outcomes	1) Students working together will be able to explain how different professional roles and how collaborative practice is influenced by the Japanese and their countries systems of health and care.

Theme 2

Advanced Health Technologies and community development	
Duration	From 2nd week onwards
Sub-module Learning Outcomes	1) Students learn about digitalization and advanced technologies used in health and care and how this impacts practices, including a) interprofessional collaboration, b) profession specific practices, and c) now and into the future. Examples are technologies supporting diagnostics and treatment, or supporting daily living. 2) Students will also learn about the creation of a vital metropolitan for all, including measures and initiatives, such as comprehensive community care, and promotion of an inclusive, barrier free and age friendly city.

Theme 3

Application of Collaborative Practice and Advanced Health Technologies	
Duration	Throughout the five weeks week culminating in a presentation and written reports in the last week of July (Students participating for two weeks will give a presentation on the final day of the program.)
Sub-module Learning Outcomes	1) Students are to apply their learning to fictitious but realistic cases and present a intervention/care plan as might be provided in Japan and their country. Cases might be patients with stroke, cancer, issues of aging. 2) Students are to describe and explain how sociocultural in general and health and care systems specifically shaped the treatment/care plan.
